

ADSL or Broadband connections

The ability to use your existing single telephone line (known as an analogue line) for dual use i.e. you can use the telephone in the normal way and at the same time be on the Internet.

The Benefits

- Internet downloads at over 20x the best analogue connection
- Use your telephone whilst browsing the Internet!
- No waiting time to connect
- Personal support based in the UK
- Have more than one computer connected at the same time for no extra cost.

The Cost

- Prices start at £14.99 (£17.63 incl Vat)
- A one off set-up fee of £50.00 in lieu of a contract period
- If you require more than one computer to connect to the Internet then purchase an ADSL router for only £39.00 —this allows up to 4 network computers to share the same connection.
- We recommend a router (rather than a modem) which contains a firewall to protect you and allows up to 4 simultaneous users. These cost £39 plus vat or £59 plus vat for a wifi version

Remember that your existing telephone bill will reduce because all Internet connections become **free** irrespective of the time or duration.

Ask for references from existing customers. They all say that the service is second to none. Queries, questions or problems are rare but solved instantly by UK based personnel.

What to do next

Complete the two forms :

- Application form
- Standing Order

It's as simple as that:-

Provided that ADSL is available in your area, connection usually takes 5 days.
